# Design Specification: Satyashodhak Udyojak Portal

**Version:** 1.0 (Enterprise-Grade)

**Core Philosophy:** Trust through Clarity, Stability through Structure, Accessibility for All.

---

## 1. Visual Identity & Color Theory

We are using a **"Financial Blue"** palette. Blue stimulates the prefrontal cortex to associate the interface with stability and security (like Chase, Barclays, or PayPal).

| Element | Hex Code | Purpose |
|---|---|---|
| **Primary Brand** | #003366 | Deep Navy (Trust, Authority). Use for Headers/Primary Buttons. |
| **Secondary Brand** | #005BB5 | Investment Blue. Use for active states and links. |
| **Action Success** | #1B5E20 | Dark Green. For deposits and "Transaction Successful." |
| **Action Danger** | #B71C1C | Deep Red. For withdrawals, debt alerts, or "Delete." |
| **Background (App)** | #F4F7FA | Off-white blue tint. Reduces eye strain compared to pure white. |
| **Surface/Card** | #FFFFFF | Pure White. High contrast for financial data |

| | | |
|---|---|---|
| | | containers. |

---

# 2. Typography & Readability

Financial portals are 90% text. We need a typeface that is "Neutral but Modern."

- **Primary Font:** Inter or Roboto. (Variable font weight 300 to 700).
- **Scale:**
  - **Headlines:** 24px - 32px (Semi-bold)
  - **Body Text:** 16px (Regular) - Never go below 14px for accessibility.
  - **Data Points:** 18px (Medium) - Use **Monospaced numbers** (font-variant-numeric: tabular-nums;) so that columns of currency align perfectly.

---

# 3. UI Components & Layout Logic

## A. The Dashboard (The "At-a-Glance" Rule)

- **Hero Cards:** Large cards at the top showing "Total Balance," "Current Loan," and "Next EMI Date."
- **The "Quick Action" Bar:** Floating or fixed icons for "Deposit," "Transfer," and "Pay EMI."
- **Transaction Feed:** A clean list with icons: $\uparrow$ (Inbound/Green) and $\downarrow$ (Outbound/Red).

## B. Forms & Input

- **Floating Labels:** Users should never forget what they are typing.
- **Input Masking:** Automatically format currency (e.g., adding commas: 1,00,000) as the user types.
- **Confirmation Modals:** Every "Send" or "Withdraw" action **must** trigger a "Review Transaction" pop-up before final submission to prevent errors.

---

# 4. UX Patterns (The "3-Click" Rule)

- **Navigation:** A persistent Sidebar (Desktop) or Bottom-Bar (Mobile).
- **Search/Filter:** Users must be able to filter transactions by date range or transaction type within 2 seconds.
- **Empty States:** If a member has no loans, don't show a blank screen. Show a "Need a Loan? Apply here" illustration.

---

## 5. Technical Compatibility & Responsiveness

- **Mobile First:** 80% of members will check balances on their phones. Use a **Fluid Grid**.
- **PWA Ready:** The UI should be designed so it can be "Installed" as a Progressive Web App.
- **Touch Targets:** All buttons must be at least **44x44 pixels** to accommodate various finger sizes.
- **Loading States:** Use "Skeleton Screens" (grey shimmering boxes) instead of a spinning wheel. This makes the app *feel* faster than it actually is.

---

## 6. Accessibility (WCAG 2.1 Compliance)

- **Contrast Ratio:** Minimum 4.5:1 for all text.
- **Screen Readers:** Every icon must have an aria-label.
- **Language:** Given the "Satyashodhak" context, the UI must support **English and Marathi** toggle without breaking the layout (Unicode support is mandatory).

---

## 7. The "Extra Mile" Design Features

- **Dark Mode:** A midnight-blue theme for low-light usage.
- **Print CSS:** A dedicated stylesheet so that when a member clicks "Download Receipt," it prints a clean, professional PDF without the website navigation menus.
- **Micro-interactions:** A subtle "shimmer" effect on the "Submit" button to show the system is processing the request.

---

**How to use this:** Copy this entire block and paste it into your development chat. Tell the AI: *"Implement the frontend of the Satyashodhak Udyojak Portal following these UX/UI specifications exactly."*

Would you like me to now draft the **Information Architecture (Site Map)** to show how these screens connect?
